

UNS No8926/25-6MO

1. Brief introduction:

UNS No8926(25-6MO)'s a super-austenitic stainless steel consisting of 6% molybdenum and enhanced by an addition of nitrogen. The nickel and chromium make-up of this alloy make it resistant to a wide range of corrosive conditions.

It's especially resistant to non-oxidizing acids such as sulfuric and phosphoric. The high molybdenum content and nitrogen provide resistance to pitting and crevice corrosion, while copper enhances resistance to sulfuric acid.

It's used in chemical and food processing, paper bleaching plants, marine and offshore platform equipment, air pollution control systems, salt plant evaporators, Condenser tubes, service water pipes and feed water heaters.
